CAREER OBJECTIVE

I am a fourth-year Information Systems student at the University of Information Technology (UIT – VNU HCM) with internship experience in healthcare data analytics. During my internship, I worked with hospital databases, optimized SQL queries, and contributed to the development of analytical dashboards used for operational reporting. Beyond my internship, I have completed several end-to-end data analytics projects covering data preparation, exploratory analysis, predictive modeling, and business intelligence. I am looking for opportunities in Data Analytics, Business Analysis, or Data Engineering where I can apply both analytical thinking and technical skills to solve real business problems.

EDUCATION

University of Information Technology (UIT) (2023 - Present)
Vietnam National University – Ho Chi Minh City

Bachelor of Information Systems

Built a solid foundation in database systems, business intelligence, data warehousing, and systems analysis through academic coursework. Applied these concepts in practical projects involving SQL, Python, dashboard development, and business analytics using real-world datasets.

EXPERIMENT

Nguyễn Tri Phương Hospital - Ho Chi Minh City February 2026 - May 2026

Intern Data Analyst

- Explored the Hospital Information System (HIS) database to understand how operational and healthcare data supported reporting activities.
- Wrote and optimized SQL queries to retrieve, transform, and validate data for internal reports and dashboards.
- Built analytical dashboards that enabled hospital staff to monitor patient volume, revenue, insurance coverage, and departmental performance.
- Worked with supervisors to verify reporting requirements and ensure the accuracy of business metrics before deployment.
- Contributed to improving internal reporting workflows by streamlining data retrieval and dashboard functionality.

PROJECT

Amazon E-Commerce Sales & Customer Feedback Analytics -

Personal project

- Analyzed a dataset of more than 1,400 Amazon products to understand how pricing, discounts, customer ratings, and product categories influenced purchasing behavior.
- Prepared the dataset for analysis by handling missing values, correcting inconsistent formats, and engineering additional analytical features using Python (Pandas and NumPy).
- Explored relationships between pricing strategies, discount levels, and customer satisfaction through statistical analysis and data visualization.
- Found that products discounted between 30% and 50% generally maintained stronger customer ratings, while excessive discounts were often associated with lower review scores.
- Summarized analytical findings into clear visualizations and business insights that could support pricing and promotional decisions.

Hospital Management Analytics Dashboard -

Internship Project | Data Analyst & Full-stack Developer

- Studied hospital operational workflows and explored the Hospital Information System (HIS) database to understand how healthcare, financial, and insurance data supported daily operations.
- Designed SQL queries to integrate information from multiple database tables into datasets suitable for reporting and visualization.
- Developed an interactive dashboard using Spring Boot, React, TypeScript, and Oracle to monitor patient volume, revenue, insurance coverage, and departmental performance.
- Worked with supervisors to verify reporting requirements and ensure dashboard metrics accurately reflected business needs.
- Implemented role-based access control so different departments could securely access relevant operational information.

SKILLS

Technical skills	Programming languages (Python, SQL, Java), Data Analyst (Exploratory Data Analysis (EDA), Data Cleaning, Data Wrangling, Statistical Analysis, Feature Engineering, Predictive Analytics), Business Analysis (Requirement Analysis, Process Analysis, KPI Reporting, Dashboard Development, Power BI, Excel).
Soft skills	Teamwork and collaboration, Critical thinking and problem-solving, Active listening, Conflict resolution, Adaptability, Continuous learning, Effective communication.
Langague	Vietnamese (Native), English (IELTS 6.0), Basic French, Basic Korean, Basic Spanish.
Certificates	Google Data Analytics Professional Certificate, HackerRank SQL (Advanced)
