CAREER OBJECTIVE

I am a fourth-year Information Systems student at the University of Information Technology (UIT – VNU HCM) with internship experience in healthcare data analytics. During my internship, I worked with hospital databases, optimized SQL queries, and contributed to the development of analytical dashboards used for operational reporting. Beyond my internship, I have completed several end-to-end data analytics projects covering data preparation, exploratory analysis, predictive modeling, and business intelligence. I am looking for opportunities in Data Analytics, Business Analysis, or Data Engineering where I can apply both analytical thinking and technical skills to solve real business problems.

EDUCATION

University of Information Technology (UIT) (2023 - Present)
Vietnam National University – Ho Chi Minh City

Bachelor of Information Systems

Built a strong foundation in systems analysis, database design, business intelligence, software engineering, and information systems. Applied academic knowledge through projects involving business process analysis, reporting solutions, dashboard development, and database management.

EXPERIMENT

Nguyễn Tri Phương Hospital - Ho Chi Minh City February 2026 - May 2026

Intern Data Analyst

- Explored the Hospital Information System (HIS) to understand operational workflows and reporting processes across different departments.
- Worked with supervisors and developers to clarify reporting requirements and translate business needs into dashboard functionalities.
- Analyzed healthcare and financial data using SQL to support operational reporting and decision-making.
- Participated in validating reporting outputs to ensure business requirements were accurately reflected in the final dashboards.
- Contributed to improving internal reporting processes by identifying opportunities to streamline data retrieval and reporting workflows.

PROJECT

Amazon E-Commerce Sales & Customer Feedback Analytics -

Personal project

- Analyzed a dataset of more than 1,400 Amazon products to understand how pricing, discounts, customer ratings, and product categories influenced purchasing behavior.
- Prepared the dataset for analysis by handling missing values, correcting inconsistent formats, and engineering additional analytical features using Python (Pandas and NumPy).
- Explored relationships between pricing strategies, discount levels, and customer satisfaction through statistical analysis and data visualization.
- Found that products discounted between 30% and 50% generally maintained stronger customer ratings, while excessive discounts were often associated with lower review scores.
- Summarized analytical findings into clear visualizations and business insights that could support pricing and promotional decisions.

Hospital Management Analytics Dashboard -

Internship Project | Data Analyst & Full-stack Developer

- Analyzed hospital reporting requirements and identified operational KPIs required by different departments.
- Explored the HIS database to understand data relationships supporting business reports.
- Designed an interactive dashboard to help users monitor patient volume, revenue, insurance coverage, and departmental performance.
- Collaborated with supervisors to validate reporting requirements and dashboard outputs before deployment.

SKILLS

Technical skills	Programming languages (Python, SQL, Java), Data Analyst (Exploratory Data Analysis (EDA), Data Cleaning, Data Wrangling, Statistical Analysis, Feature Engineering, Predictive Analytics), Business Analysis (Requirement Analysis, Requirement Gathering, Business Process Analysis, Process Mapping, KPI Analysis, Gap Analysis, Stakeholder Communication, Dashboard Development, Power BI, Excel).
Soft skills	Teamwork and collaboration, Critical thinking and problem-solving, Active listening, Conflict resolution, Adaptability, Continuous learning, Effective communication.
Langague	Vietnamese (Native), English (IELTS 6.0), Basic French, Basic Korean, Basic Spanish.
Certificates	Google Data Analytics Professional Certificate, HackerRank SQL (Advanced)
